

Final Project Grading Rubric

RUBRIC	EXPECTATION	BREAKDOWN	
Scenario Identification (20%)	Comprehensively and clearly identifies and describes a dataset. Gathers correct and highly credible data that directly answers the central question. The objective of the analysis is clearly stated.	○ Data set selected meets all requirements stated in final project document ○ Data is logical and allows application of methods taught in this course	○ Data Selection and Scenario Identification 200 points
Analysis (25%)	Presents an insightful and thorough analysis. Analysis is driven by logical arguments clearly related to central question.	○ Identify Missing values/outliers and remove them ○ If NA's or anomalies do not exist in the dataset chosen, create them artificially, and use methods to treat the missing values and anomalies ○ Create Pivot Tables/Data tables that show data that are relevant, i.e. appropriately selected important variables	○ Analysis conducted is relevant and is along the lines of concepts discussed in class 250 points
Results and Conclusions (20%)	Clearly identifies and articulates all implications and consequences of analysis. The conclusions are clearly related to the results of the analysis.	○ Results shown with relevant explanations ○ Code written with sufficient comments ○ Tasks performed clearly stated	○ Intended objectives stated in 'Scenario Identification' are achieved or an attempt is made to achieve them 200 points
Visual Appeal And Interactive Element (25%)	Visuals display high levels of creativity and strongly enhance the effectiveness of the presentation. Clearly leverages principles of good visualizations.	5 visualizations in relevant sections of the project that show information such as: ○ Missing values/outlier visualizations ○ Relationships between variables showing positive or negative correlations ○ Visualizations with filters, i.e. top 10 values from a particular variable ○ Etc. Note that visualizations are completely up to you. The above points may or may not suit your project, so tailor your viz's carefully to demonstrate the contents/results of your application. An interactive element of the project must be shown, be it a Dashboard in R or interactive plots in R/Python.	○ Visualizations - Each visualization 20 points for a total of 100 points ○ Interactive Element 150 points
Overall Quality (10%)	High level analysis and visualizations Well curated report with thoroughly explanations Demonstrate good understanding of concepts in execution of project requirements	○ Graded on an individual basis upon considering all aspects of the project.	○ 100 Points

Total 1000 points
